

Who is CPS Energy?

Established in 1860, CPS Energy is the nation's largest community-owned provider of electric and natural gas services. We provide safe, reliable, and competitively priced services to **950,129** electric and **389,116** natural gas customers in San Antonio and portions of seven adjoining counties. Our customers' combined energy bills rank among the lowest of the nation's 20 largest cities while generating \$9 billion in revenue for the City of San Antonio over the last 80 years.

As a trusted and strong Community partner, we continuously focus on job creation, economic development and educational investment. True to our People First philosophy, we are powered by our skilled workforce, whose commitment to the community is demonstrated through our employees' volunteerism in giving back to our city and programs aimed at bringing value to our customers.

We are among the top public power wind energy buyers in the nation and number one in Texas for solar generation.

How can you follow the progress of this project?

The CPS Energy project team will post project information on the CPS Energy website at cpsenergy.com/infrastructure.

Who can answer your questions?

The website will include regular updates on the project as steps are completed.

Also, you may write, call or email to:

SPRUCE TO PAWNEE

TRANSMISSION LINE REBUILD PROJECT

INFORMATION ABOUT THE SPRUCE TO PAWNEE TRANSMISSION LINE REBUILD PROJECT

What is the Spruce to Pawnee Transmission Line Rebuild Project?

CPS Energy is proposing to rebuild approximately 46 miles of existing horizontal single circuit 345kV transmission infrastructure into new vertical double circuit 345kV transmission infrastructure traversing through Bexar, Wilson and Karnes Counties. Transmission lines consist of specially designed structures composed of various material (wood, concrete, steel, etc.) and wires that move electricity long distances at high voltages from station to station.

How might this project affect you?

CPS Energy is evaluating multiple means to most effectively rebuild the transmission line with minimized impact. Additional right-of-way may be needed to safely reconstruct this transmission line. If it is determined to be needed, CPS Energy anticipates purchasing additional property rights from property owners to expand the current right-of-way for the new transmission infrastructure. Your input and feedback are important to our evaluation of the project.

Why is this project needed?

The reconstruction of the transmission line is needed to increase the resiliency and reliability of Texas' electric grid by adding another transmission pathway to increase support of new renewable generation in South Texas and the planned retirement of generation in San Antonio.
